Dkt. 1166/58111

## Listing of Claims

The following listing of claims will replace all prior versions, and listings, of claims in the subject application:

(currently amended) A method of generating medical information including quantitative and image data, said method comprising the steps of:

performing an image acquisition of at least a portion of a patient to be examined;

generating image data based on the performed acquisition; generating quantitative data based on the performed acquisition; and

constructing a DICOM compatible file, wherein the image data being is provided in an image data field of the DICOM compatible file and the quantitative data being is provided in a field of the DICOM compatible file other than the image data field.

- 2. (original) A method as recited in claim 1, wherein the acquisition is performed and the image data generated using a bone densitometer.
- (original) A method as recited in claim 1, wherein the quantitative data comprises bone mineral density (BMD)

Dkt. 1166/58111

data or quantitative morphometry.

- 4. (original) A method as recited in claim 2, wherein the image data comprises an image of a patient's anatomy which was acquired.
- (original) A method as recited in claim 1, wherein the quantitative data comprises quantitative report data.
- 6. (original) A method as recited in claim 5, wherein the quantitative report data comprises BMD data, T scores and Z scores.
  - 7. (previously presented) A method as recited in claim 1, wherein the quantitative data provided in an image comments field and is in a form of at least one of HTML, XML and Java Script files.
  - 8. (previously presented) A method as recited in claim 7, wherein the quantitative data in the image comments field contains analysis results in computer readable form.
  - (original) A method as recited in claim 8, wherein the computer readable form in JavaScript.

Dkt. 1166/58111

- 10. (previously presented) A method as recited in claim 8, wherein the computer readable form is HTML.
- (previously presented) A method as recited in claim 11. 1, further comprising steps of:

communicating the DICOM compatible file across a network; receiving the DICOM compatible file at a DICOM compliant station;

extracting the quantitative data from the field of the DICOM compatible file other than the image data field; and generating a report using the extracted quantitative data.

- 12. (previously presented) A method as recited in claim 11, wherein the extracting step is performed using a software control.
- 13. (original) A method as recited in claim 1, wherein the quantitative data includes raw data used to generate a report.
- 14. (original) A method as recited in claim 1, wherein the other field of the DICOM file is an Image Comments field.

Dkt. 1166/58111

- 15. (previously presented) A method as recited in claim
  7, wherein data in the Image Comments Field contains
  parameters which control a process of report generation
  allowing for customization of a report.
- 16. (original) A method as recited in claim 5, wherein the quantitative report data comprises quantitative morphometry data.
- 17. (original) A method as recited in claim 8, wherein the computer readable form is XML.
- 18. (previously presented) A method of generating a DICOM file including embedded quantitative data, said method comprising:

generating a report image file from quantitative data;
embedding the report image file as an image file portion
of the DICOM file; and

embedding the quantitative data, used to create the report image file, in a portion of the DICOM file other than the image file portion.

19. (original) A method as recited in claim 18, wherein

Dkt. 1166/58111

the report image file comprises a bitmap image file.

- (original) A method as recited in claim 18, wherein 20. the quantitative data used to create the report image file comprises raw data.
- (original) A method as recited in claim 18, wherein 21. the quantitative data used to create the report image file comprises bone mineral density (BMD) data.
- (previously presented) A method as recited in claim 22. 18, wherein the quantitative data is embedded in an Image Comments field of the DICOM file.
- (previously presented) A computer executable 23. software code stored on a computer readable medium, the code for creating a DICOM compliant file, said code comprising:

code for creating a report, including quantitative data, from acquisition data generated by at least one of an image capture device and another form of data entry;

code for creating a bitmap image file representing the created report;

code for embedding the bitmap image file in an image field of a DICOM compliant file; and

Dkt. 1166/58111

code for embedding the quantitative data in a field of the DICOM compliant file other than the image field.

- (original) A computer executable software code as 24. recited in claim 23, wherein the quantitative data comprises raw data used to create the report.
- (original) A computer executable software code as 25. recited in claim 23, wherein the quantitative data comprises bone mineral density (BMD) data.
- (original) A computer executable software code as recited in claim 23, wherein the other form of data entry includes manual entry.
- 27. (original) A computer executable software code as recited in claim 23, wherein the other field comprises an Image Comments field of the DICOM file.
